Move Ansible Community docs into the ansible-community org #240

gotmax23 opened this issue on Jun 5, 2023 · 11 comments

gotmax23 commented on Jun 5, 2023

Member

Summary

Currently, several community docs such as the [Collection Requirements](#)^[1] and the [Ansible Roadmap](#) are stored in the ansible/ansible repository. The SC does not have access to this, and it's difficult for us to keep tabs on changes when they're mixed in with a bunch of ansible-core stuff. Also, it's hard for us to make changes when we need to wait on core review.

I propose moving these docs to a separate repository in the ansible-community org that [@ansible-community/steering-committee](#) has access to. I'm not sure whether we can integrate these docs back into the docsite build process or whether we should create a docs.ansible.com subdirectory that houses an independently generated site.

1. This used to be in <https://github.com/ansible-collections/overview>, but it was moved for some reason. ↗

ansible/ansible

ansible/ansible-documentation

```
$ python docs/bin/clone-core.py --help
usage: clone-core.py [-h] [-b BRANCH] [--no-branch] [--repo REPO]

Clone relevant portions of ansible-core from ansible/ansible into the current source tree to facilitate building docs.

options:
  -h, --help            show this help message and exit
  -b BRANCH, --branch BRANCH
                        Set the branch of ansible-core to clone. Defaults to current branch (devel)
  --no-branch           Checkout the default git branch of --remote. This is useful when cloning a local ansible-core fork
  --repo REPO          ansible-core repository to check out. Default: https://github.com/ansible/ansible
```

constraints-base.in - Known limitations for transitive dependencies

requirements-relaxed.in - Base set of dependencies and unpinned versions of essential packages like `sphinx`

constraints.in - Known limitations for direct dependencies

requirements.in - Stable Ansible doc builds with specific and tested versions of `antsibull-docs` and `sphinx`

```
$ nox --list
Sessions defined in ansible-documentation/noxfile.py:

- static -> Run static checkers
- formatters -> Reformat code
- formatters_check -> Check code formatting without making changes
- typing
- spelling -> Spell check RST documentation
* lint
- pip-compile-3.10(requirements)
- pip-compile-3.10(formatters)
- pip-compile-3.10(typing)
- pip-compile-3.10(spelling)
- pip-compile-3.10(requirements-relaxed)
- pip-compile-3.10(static)
* clone-core -> Clone relevant portions of ansible-core from ansible/ansible into the current
* checkers(docs-build) -> Run docs build checkers
* checkers(rstcheck) -> Run docs build checkers
* make -> Generate HTML from documentation source using the Makefile

sessions marked with * are selected, sessions marked with - are skipped.
```
